Khan Academy Problem Set	Class Prep Assigment
Finding limits numerically	2
One-sided limits from graphs	2
Two-sided limits from graphs	2
Two-sided limits using advanced algebra	3
Two-sided limits using algebra	3
Squeeze Theorem	3
Continuity	5
Slope of secant lines	6
Tangent slope is limiting value of secant slope	6
Power rule (advanced)	7
Power rule (basic)	7
The formal and alternate form of the derivative	7
Product rule	8
Quotient rule	8
Special derivatives	8
Chain rule on three functions	9
Chain rule on two functions	9
Combining the product and chain rules	10
Implicit differentiation	10
Related rates	11
Critical numbers	13
Extreme values from graphs	13
Recognizing concavity	13
Concavity and the second derivative	13
Second derivative test	14
Limits at infinity where f(x) is unbounded	14
Limits at infinity where x is unbounded	14
Extreme value theorem	16
Extreme values from graphs	16
Optimization	17
Applications of differentiation in biology, economics, physics, etc.	18
Finding antiderivatives	19
Graphs of antiderivatives	19
Finding the constant of integration	19
Using rectangles to approximate area under a curve	20
Riemann sums and sigma notation	20
The definite integral as the limit of a Riemann sum	20
Evaluating a definite integral from a graph	20
The fundamental theorem of calculus	22
Area between a curve and an axis	23
Evaluating definite integrals	23
Area under a rate function equals net change	24
u-substitution	25
